

## Review Form Response

### Review FOSS4G Academic Track Submission

This form is for reviewing a FOSS4G Academic Track Submission.

Remarks to the editors \*

The paper presents an interesting idea of multiscale vector rendering. The idea is proved to work with 2 data sets. However, the paper is not well structured and it's not up to standard to be considered for a journal refereed publication.

Remarks to the author

Interesting idea but not enough background review, please include more references.  
The methodology needs to be presented more clearly  
Require more evidence of performance comparison with other algorithms.

Recommendation \*

- Strong Accept and recommendation for inclusion in Transactions in GIS
- Strong Accept
- Weak Accept
- Reject
