Tabs – Selecting, Searching and Printing

Select and search allow you to find taxlot accounts geographically or by attribute. Once a selection has been made you can manipulate the selected set with additional tools.

Selection commands allow you to zoom to the selection, use buffer to find nearyby taxlots, create a file, or restart search.

After you have used the mouse to search for accounts your selection will appear in the results tab.

Tools will also allow you to zoom to an individual, find near by taxlots with buffer, highlite the selected taxlot or remove it from the selection set.

You can also search for owners, mapnumbers, or street address.

For each selected taxlot account basic attributes will be displayed. For more information select the MapTaxlot number.
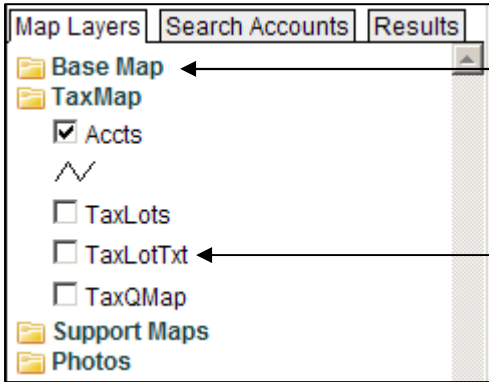

You can print a map in a variety of formats, give a custom map title, and select a map quality.
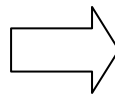

You can output your map as an HTML, Image or PDF format.

**Map Layers Tab–** Use the MapLayers tab to change what layers appear on your map.

Use the mouse to locate a point (on a street). If you have access to Google and they have mapped your street then you will see a streetview in a new window.

| Map Layers | Geocode Address | Results |

Geocode Address

This tool searches Google's geocoder. Search strings can be an address (e.g. 1060 W. Addison Street, Chicago), a landmark (e.g. Empire State Building) or intersection (e.g. Hennepin and Lake, Minneapolis).

Enter Address:

800 exchange astoria or

Cancel   Go!

By entering a street address, city and state you can use Google to zoom to an address.
