

# A High-End SDI with PostgreSQL/PostGIS, GeoServer, MapServer and Mapbender

Astrid Emde, CCGIS Bonn  
(Germany)

# FIONA - Presentation

- What is FIONA?
- History of the project
- Software requirements
- Components
- Workflow
- Future developments

## FIONA – Flächeninformation und Online Antrag

- Online Agricultural Subsidy Application System
- Operated by the Ministry of Agriculture of the Federal State of Baden-Wuerttemberg in Germany
- Realization in 2005/06 in cooperation with CCGIS and BGS-AG and IZLBW

## FIONA - Prospects

- Reference Project **FloRLP**
- Realisation till spring 2006
- Looking for a fast – reliable – easy solution
- Low running costs
- Ease the subsidy progress

## What does FIONA offer?

- The portal provides authenticated and secured access for 80.000 farmers to coordinate the subsidies for their farmland

The screenshot displays the FIONA web portal interface. The main map shows a satellite view of a land parcel with a red outline and a '2004 Schöntal' label. The interface includes a search bar, a legend, and several data tables.

# FIONA

The farmer can:

- Apply for subsidy grants
- Measure
- Digitize
- Calculate their farmland area
- Get an overview of the subsidy areas

# FIONA – Open Source Technologie

The project is implemented with Open Source technologies.

- SUSE-Linux Enterprise Server
- Apache
- PostgreSQL/PostGIS
- GeoServer
- MapServer
- Mapbender

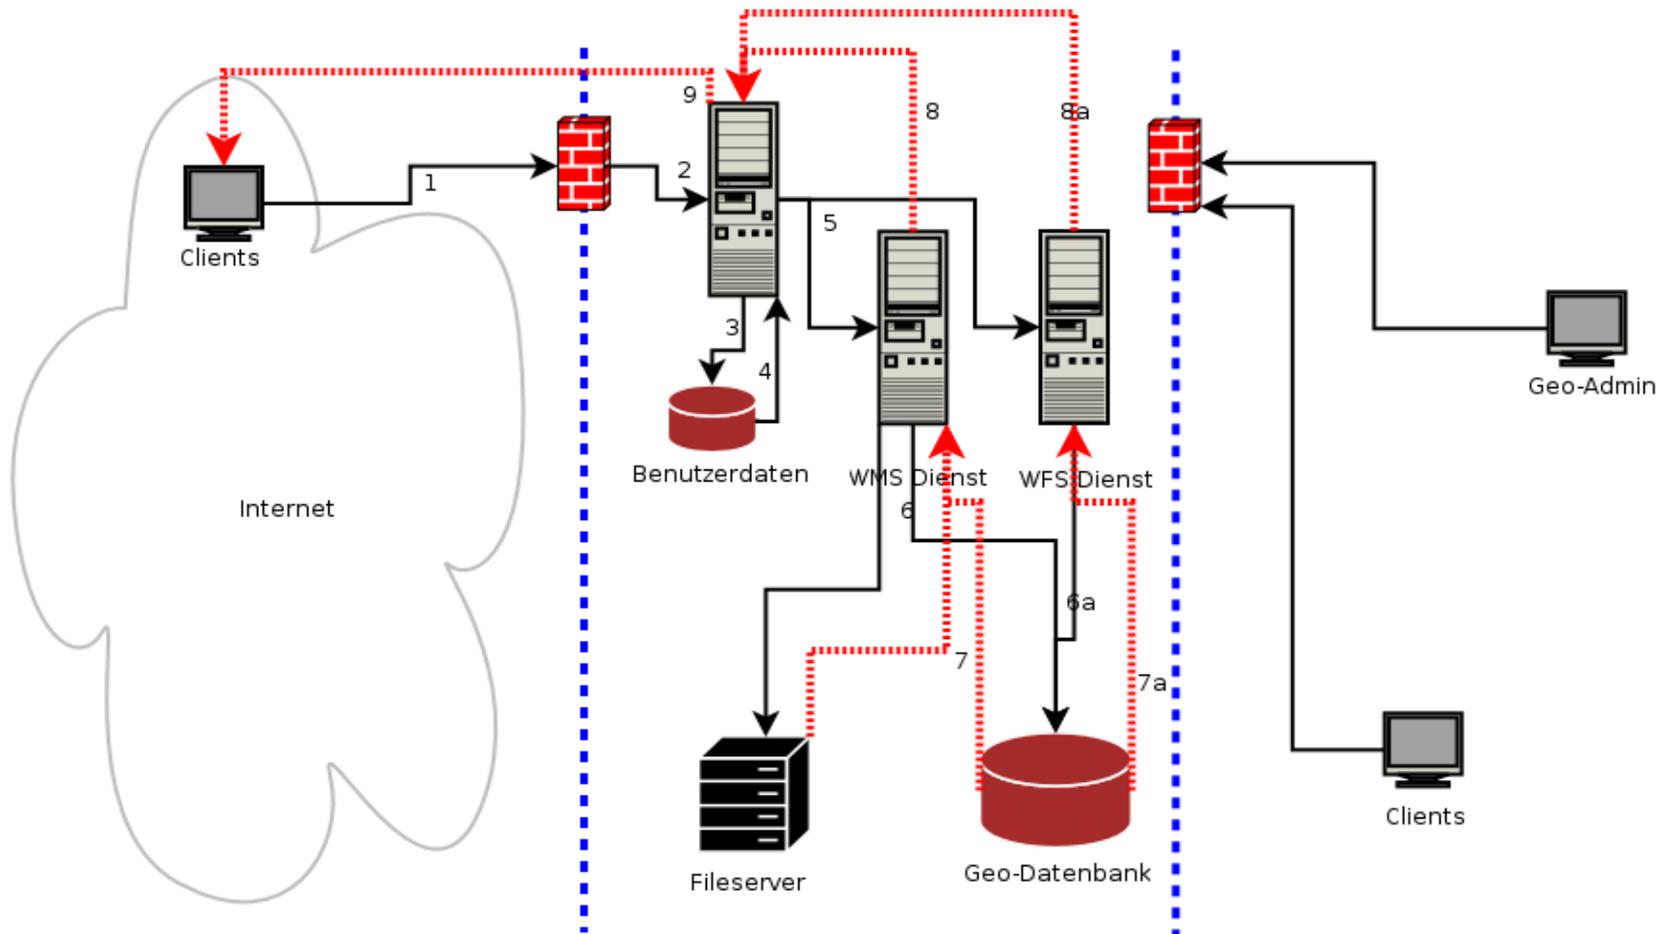

## Hardware components

- Application- & database-Server (2):
  - 4 CPUs, 8 GB RAM,
  - Resources aprox. 350 GB
- Web-Server:
  - 1 CPU, 2 GB RAM
  - Resources: at least 140 GB

## FIONA - Data Access by OGC Standards

The access to the data is realised with services based on OGC Standards.

- Web Map Service (WMS):  
MapServer
- Transactional Web Feature Service:  
WFS-T GeoServer
- Download of geometries as GML

## Datavolume

- Datavolume of GIS aprox. 250 GB
  - aprox. 180 GB Orthofotos (Filesystem)
  - PostGIS Geom 20 GB
  - FSV Data at least 60 GB
  - Transaction-logs at least 5 GB, other Logs about 1 GB, DB-Backup 40 GB

## PostgreSQL/PostGIS

- 8.5 million parcels of the federal state (cadastre data)
- Additional subjects (nature, water)
- Userbased geometries (polygons, points)
- User has read and write access
- PostGIS Geom 20 GB

## MapServer as WMS

- Background imagery is served by MapServer WMS
  - Orthophotos of the federal state
  - Cadastral data of the parcels
  - Nature
  - Water

## GeoServer – Access to the Geodata

- Read and Write access to geographic features is provided by GeoServer as OGC WFS-T
- User specific features are overlaid and served by GeoServer WFS

## Mapbender Portal

- FIONA – GIS
- Management of user access and orchestration of the OGC services.
- Integration in the portal
- Providing the functionality for administrators and users
- Navigation, FeatureInfo and Digitizing, Gazetteer

## Workflow before FIONA was set up

- Farmers filled out formulars
- Draw their parcels in maps on paper
- Send them to the authorities

## FIONA - simplified the Workflow

- Farmer logs in with his account
- User-dependent display of the parcels
- Project is opened with the extent of the farmers parcels
- Online digitizing is provided
- Online application for subsidy
- Faster processing
- Less errors
- More transparency for farmers and administration

# Administration Frame

- Status of FSV and login informations

# FIONA-GIS

- Displays the parcels of the farmer and basic data
- Connection between FSV and GIS by parcel number

The screenshot shows the FIONA-GIS web application interface. The main map displays a parcel with a red outline and a pink label '2004 Schöntal'. The interface includes a search bar, a legend, and several data panels.

# Component of the GIS

The screenshot shows a GIS web application interface with several key components highlighted by callouts:

- menubar**: Points to the top navigation bar containing search, zoom, and information icons.
- Attribut- and FeatureInfo**: Points to the right-hand panel displaying detailed information for a selected parcel.
- Search**: Points to the search input field in the left sidebar.
- WFS Search for parcels**: Points to the search results area in the left sidebar.
- Schlagbildung – extended FeatureInfo**: Points to a table at the bottom right showing application data.
- Search & download of own objects**: Points to the 'Suche Eigene Objekte' section at the bottom left.

**Parcel Information Panel:**

<b>Flurstück</b>

## FIONA - Features of the GUI

- Access to actual data via WMS
  - Basic data as background information
  - Display of the parcels of the farmer
  - Parcels from the last year appear
  - Additional data (like nature 2000, water protection area)

All necessary data for a correct subsidy appliance is provided

# FIONA - Features of the GUI

Feature information about the parcels:

- Parcel number
- Area
- Type
- Information about earlier subsidies

## FIONA - Features of the GUI

- Download of digitized polygons as GML
- PDF-print with comments, project information and legend

## FIONA – Experiences with the System

- Users have to get used to the portal and its multiple functions
- Introduction of the farmers by information sheets and short courses
- performance problems due to slow connection to the internet (modem)
- Transfer potential for the software
- Cooperation of authorities by open and modular architecture
- Interoperability in datamanagement and function

## FIONA – Future Developments

- Editing of existing geometries
- Snapping on existing geometries
- SLD support

## FIONA – Test the SDI
