

# Australia/New Zealand Chapter Annual Report

## ***About the Chapter***

We need this content.

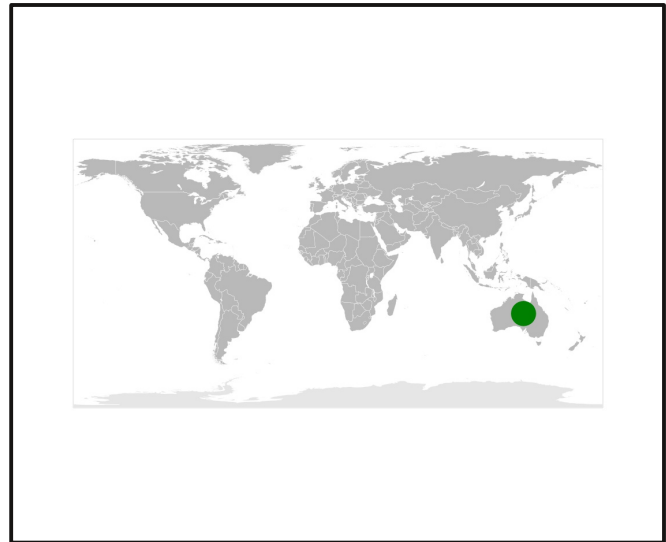

## ***Events***

The chapter held FOSS4G-AU 2012, an “unconference” for the region. The event was a great success and people from all over Australia attended. The first day featured a number of talks, while the second day was devoted to a code sprint.

There were several meetups held in the Brisbane area with representation from both the QGIS and uDig communities.

## ***Member Activities***

Chapter members have been active with the Melbourne Open GIS Meetup Group and have presented topics on OSGeo Software.

## ***Areas for Improvement***

The chapter would like to do more promotion at area conferences. It would also like to do more promotion of open source geospatial software at non-OSGeo events in the area. The chapter would also like to identify Australian examples of the application of open source GIS as case studies.
